The discrimination ability of Texas Horned Lizards (*Phrynosoma cornutum*) during antipredator responses was tested with snakes of two genera having distinctly different prey foraging and ...

## **Antipredator Defenses in Birds and Mammals.**

Birds most likely evolved an innate aversion to PAN to avoid poisoning by HCN, which is only produced in large quantities in attacked gregarious locusts . Thus, we confirmed our hypothesis that PAN participates in antipredator defense in locusts by acting as an aposematic olfactory signal and toxin precursor.

### **9780226094366: Antipredator Defenses in Birds and Mammals ...**

It was logical to extend the focus to birds, since birds and mammals share many antipredatory traits, and birds are probably the most studied group when it comes to antipredatory defenses. By specializing in these two taxa, Caro could gain mastery over a diverse literature, giving appropriate attention to the latest breakthroughs and to often-neglected earlier works.

### **Tooth and Claw | BioScience | Oxford Academic**

Caro's 2005 book Antipredator defenses in birds and mammals has been cited in scientific papers over 1150 times. His paper "Interspecific killing among mammalian carnivores" has been cited over 690 times, while his book Cheetahs of the Serengeti Plains: group living in an asocial species has been cited over 660 times.

### **Tim Caro - Wikipedia**

Antipredator Defenses in Birds and Mammals will be of interest to both specialists and general readers interested in ecological issues.

### **Antipredator defenses in birds and mammals (Book, 2005 ...**

Antipredator adaptations are evolutionary adaptations developed over time, which assist prey organisms in their constant struggle against their predators . A predator's acquisition of a food source can be divided into four stages: detection, attack, capture and consumption.

### **Antipredator adaptation | Psychology Wiki | Fandom**

Antipredator defenses vary in effectiveness with different types of predators such that a strategy that minimizes mortality from one predator type may be useless or even a liability if used against a different type of predator with a different hunting strategy (Caro 2005).
