and egg joining to form a zygote) more efficiently.

Flowers & Their life Cycles - Biology Junction

Annuals are plants that grow from a seed, then flower and make new seeds, then die, all in less than a year. Some go through this cycle more than once in a year. Biennials are plants that take 2 years to go through their life cycle. They grow from a seed, then rest over winter. In spring, they produce flowers, set seeds and die.

Flowering plant life cycles — Science Learning Hub

Flowers and Their Life Cycles. First-time florists will be able to label the structures of simple and composite flowers after reading this handout and answering the comprehension questions.
