A medical procedure is defined as non-invasive when no break in the skin is created and there is no contact with the mucosa, or skin break, or internal body cavity beyond a natural or artificial body orifice. For example, deep palpation and percussion are non-invasive but a rectal examination is invasive.

Non-invasive procedures are also quite common. These are defined as any medical procedure which does not break the skin. Obviously, this is a massively large category. Imaging studies, including x-rays, ultrasound, MRI, and CT scans are all examples of non-invasive procedures. ECGs are also non-invasive.

### **Handbook Of Non Invasive Methods And The Skin Second Edition**

The book is a good reference on non-invasive methods and their applications in dermatology and cosmetics. It is comprehensive, although some of the topics are a little outdated, as they are the current research frontiers in non-invasive skin bioengineering. Still you can get a good starting point for any topic.

### **Handbook of Non-Invasive Methods and the Skin: Amazon.de ...**

This handbook covers the field of noninvasive biophysical methods in clinical and experimental dermatology. It is the result of a coordinated effort by some of the most prominent experts in the field. Structured to provide both educational and practical information, its value to both young researchers and senior scientists is unparalleled.
