T Le Shadow User

A shadow user is a user who's hidden in the Project Directory. Although that user has full access to the project, they can't be seen by other users on that project. This can be useful, for example, in the case of a CEO who wants to oversee the project but doesn't want to receive mail about it personally.

Shadow LDAP and federated users. Create new shadow tables for mapping LDAP and federated users to local identities. Federated users have a idp_id, protocol_id, display name, and a unique ID asserted by the identity provider. These are the minimal pieces of data required to identify returning users and provide them with a consistent identity.

Shadow users: Unified identity for multiple authentication ...

Following figure shows above commands with output. As you can see in above figure, when we tried to view the content of /etc/shadow file from a regular user account, shell denied the action. But when we performed the same action from a root user or super user account, shell allowed to it.

Shadow - Support (EN)

Dark Shadow's berserk-fueled power. Despite his weakness towards the light, Dark Shadow maintains extraordinary defensive skills, as it can still block light-creating Quirks, such as Explosion or Electrification, with some efficiency. Under little to no light, Dark Shadow becomes a large and ferocious beast with incredible offensive abilities.
